

DRONE VOLT

CerbAir Partnership - The Creation of a Comprehensive Package for the Protection of Sensitive Sites

Villepinte, France – 18th February 2019

DRONE VOLT, expert in embedded artificial intelligence and manufacturer of professional civilian drones, announces a partnership with CERBAIR, a leader in anti-drone technology.

DRONE VOLT made the strategic choice to associate with an expert in drone risk prevention in order to offer clients a complete solution by combining two perfectly complementary offers.

CERBAIR was created in 2015 following an alarming increase in drone intrusions and the threats they represent. The French company offers protective solutions that use advanced Radiofrequency (RF) technology to detect distinctive communication signals between a drone and the pilot.

The security and protection of civilian and military sites, of which DRONE VOLT has made a business priority, require adapted solutions. CERBAIR's detection and neutralization devices - combined with DRONE VOLT's surveillance solutions - form a powerful and unique tool that will prevent intrusions into specific airspace.

"The synergies are evident", declares Olivier Gualdoni, CEO at DRONE VOLT. "The surveillance and protection missions require ever more complex solutions to detect, characterize and neutralize drone intrusions. The alliance of our areas of expertise is a tremendous asset."
